Project Name	Farm Management System
Maximum Marks	5 Marks

Solution Architecture Diagram:

The diagram below shows the high-level architecture of the Farm Management System. It is organized into layers, from the user interface to the database, with clear interaction between each component.

Component Description Table:

Component Name	Description / Role in Architecture	Technologies Used
Presentation Layer	Provides user interface for farmers, admin and other users (web & mobile).	HTML, CSS, JavaScript, React / Flutter
API Gateway / Load Balancer	Handles incoming requests, ensures security and routes traffic to appropriate services.	Nginx, AWS ALB, Express / Spring Cloud
Application Layer	Contains business logic for managing farms, crops, inventory, users, analytics and notifications.	Java (Spring Boot) / Node.js, REST APIs
Database	Stores all system data such as users, farms, crops, transactions, logs, etc.	MySQL / PostgreSQL
File Storage	Stores images, documents and other uploaded files.	AWS S3 / Firebase Storage
Cloud Storage & Monitoring	Provides backup, scalability and system monitoring.	AWS Cloud / Docker / Prometheus
