Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution for the Farm Management System.

SAYS

- I want to grow healthy crops and get a good yield. •
- It is hard to track expenses and profits manually.
- I need proper guidance on
- pesticide and water usage.
- I wish there was a simple system to manage my farm activities.

THINKS

Will the system be easy to use for me?
Can it really help me get better yield and profit?
Is my farm data safe and secure?
How will I get alerts about irrigation, weather or crop diseases?

PERSONA

FEELS

DOES

FARMER (Role / User Type)

Checks the field regularly and observes crop health.

- Uses traditional methods to manage irrigation and fertilizers.
- Maintains records in notebooks (sometimes).
- Sells produce to local markets or buyers.

Worried about crop failure due to weather or pests. Stressed about rising costs and low profits.

Hopeful for better technology and support.

Motivated to improve farm productivity and income.
